

ToDoMaster app allows users to add, edit and delete tasks in the to-do list with persistent data storage.

My To-do List

✓ Click on the add button to add new task

✓ Right swipe to edit

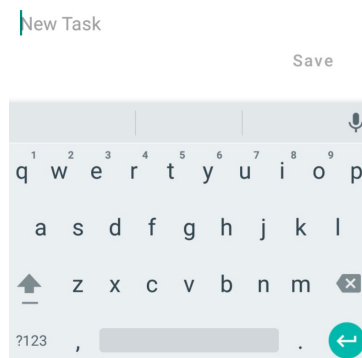

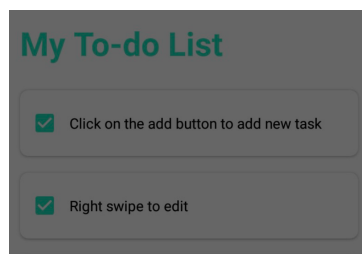

✓ Left swipe to delete

✓ Persistent data storage with SQLite

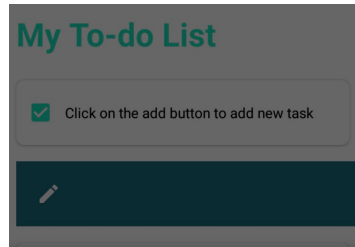

Feature 1: Add new task

Click the “add” button on the bottom right corner of the screen and the following input box will be brought up. Users can need to tap on “Save” after entering.

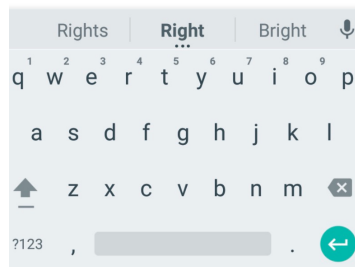

Feature 2: Edit a task

Left swipe (click and drag to left) on the task you want to edit and the following input box will be brought up. Users can need to tap on “Save” after editing.

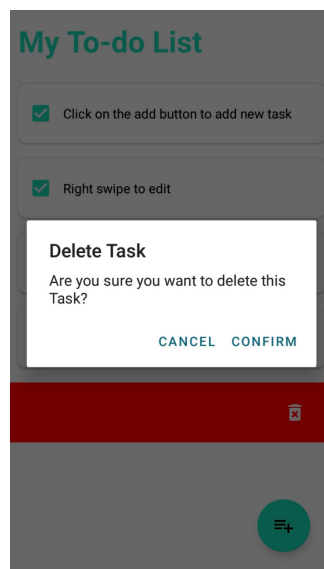

Right swipe to edit

Save

Feature 3: Delete a task

Right swipe (click and drag to right) on the task you want to delete and the following pop-up dialogue will be brought up. Users can confirm or cancel to delete.

Feature 4: Persistent data storage

Tasks entered by users will stay even after quit or restart the app.

Feature 5: Check and Uncheck the task

Check or uncheck a task by clicking on the checkbox.

Feature 6: Time the task

Still under development and will be released in the next version.

Note:

If some features didn't work as expected, please restart the emulator. Thank you! If you have any questions, feel free to contact liulucoding@outlook.com
